HAMSAVAHIN AARTH MINES LLP

Custom Website – Complete Development Requirements

We want to build the Hamsavahin website as a **fully custom-coded, premium international B2B website**, not a basic template-based website.

The website should represent Hamsavahin as a professional **global minerals, metals and commodities trading company** and should be designed for long-term scalability.

We will continuously add new products, commodities, sourcing locations, mines, suppliers, projects, trade activities, market information and company content.

The website should therefore be built with a **strong frontend, scalable backend, database architecture, admin panel and API-ready infrastructure**.

---

1. OVERALL TECHNOLOGY & ARCHITECTURE

- Fully custom-coded website
- Premium international B2B design
- Modern and professional UI/UX
- Fully responsive for desktop, tablet and mobile
- Fast-loading website
- SEO-friendly architecture
- Secure backend and database
- API-based architecture wherever required
- Clean and modular code
- Proper separation of frontend, backend and database
- Easy for future developers to maintain
- Scalable architecture for future modules and integrations
- Production-ready deployment structure
- Proper error handling and validation
- Environment-based configuration for development/staging/production

Before development starts, please prepare:

- Website architecture
- Technical architecture
- Page structure

- User flow
- Database structure
- Admin-panel structure
- API/integration plan
- Wireframes for major pages

These should be reviewed and finalized before full development.

---

2. ADMIN PANEL / CMS

The admin panel is extremely important.

We should **not have to depend on the developer every time we want to update website content**.

The admin panel should allow authorized users to manage the website.

Admin should be able to manage:

- Products
- Product categories
- Product specifications
- Product images
- Technical documents
- Product availability
- Commodity information
- Commodity prices
- Global operation locations
- Mines
- Sourcing locations
- Suppliers
- Processing facilities
- Warehouses
- Ports
- Markets
- Projects
- Trade stories
- Insights/articles

- Careers/jobs
- RFQ enquiries
- Contact enquiries
- Trading opportunities
- Website banners/content
- SEO metadata
- Documents
- Public/private visibility

Admin functionality should include:

- Add
- Edit
- Delete
- Publish/unpublish
- Draft
- Archive
- Search
- Filter
- Sort
- Status management
- Image/document upload
- Date/time tracking

If required, we should also have **role-based admin access**, such as:

- Super Admin
- Admin
- Content Manager
- Trade Desk Manager

---

3. WEBSITE STRUCTURE

The main website sections should include:

1. Home
2. About Us

3. Products
4. Live Commodity Desk
5. Global Operations
6. Our Capabilities
7. Quality & Compliance
8. Sustainability
9. Projects / Trade Stories
10. Insights
11. Careers
12. Contact Us

The architecture should allow additional sections to be added later.

---

4. HOME PAGE

The homepage should immediately communicate that Hamsavahin is a:

Global B2B Minerals, Metals & Commodities Trading Company

The homepage should include:

- Premium hero section
- Strong company positioning
- Introduction to Hamsavahin
- Key commodities
- Product categories
- Live Commodity Desk preview
- Global operations
- Interactive globe preview
- Our capabilities
- Quality & compliance
- Sustainability
- Projects / trade stories
- Global markets
- RFQ CTA
- Contact CTA

The design should feel **premium, international, corporate and trustworthy**, rather than like a generic trading-company website.

---

5. DYNAMIC PRODUCTS CATALOGUE

The Products section should be completely dynamic.

It should not be made using static HTML pages.

Each product should support:

- Product name
- Category
- Sub-category
- Description
- Origin/source
- Available quantity
- Unit
- Quality/grade
- Specifications
- Applications
- Packaging
- Loading port
- Destination/target market
- Product images
- Technical documents
- Specification sheets
- Certifications where applicable
- Availability status
- Last updated date/time
- Request Quote button

Product catalogue should have:

- Search
- Category filters
- Sub-category filters

- Product cards
- Sorting
- Individual product pages
- Related products
- Request Quote functionality

The admin should be able to add and manage products without coding.

---

6. INTERACTIVE GLOBAL OPERATIONS – 3D GLOBE / MAP

One of the major visual features should be an **interactive 3D globe/map**.

The globe should represent Hamsavahin's international operations and supply chain.

It can display:

- Mines
- Sourcing locations
- Suppliers
- Processing facilities
- Warehouses
- Ports
- Markets
- Trading destinations

When the user clicks a location:

An information panel/modal should open showing relevant information such as:

- Location name
- Country
- Location type
- Commodity
- Description
- Operations
- Capacity, where applicable
- Related products
- Images/documents, where applicable

Admin functionality:

The admin should be able to:

- Add location
- Edit location
- Delete location
- Change coordinates
- Change location type
- Add description
- Add images
- Link products
- Publish/unpublish location

We should not need to modify the source code to add a new location.

---

7. REQUEST FOR QUOTE (RFQ) SYSTEM

The website should have a proper RFQ system connected to the backend.

RFQ form:

- Product
- Quantity
- Unit
- Specification
- Destination port
- Country
- Incoterm
- Company name
- Contact person
- Email
- Phone
- Message
- Document upload

RFQ workflow:

New → Contacted → Under Discussion → Quotation Sent → Closed

Every RFQ should be stored in the admin panel.

Admin should be able to:

- View enquiry
- Update status
- Add internal notes
- Assign enquiry
- Download uploaded documents
- Search/filter enquiries
- Track enquiry history

Notifications:

Whenever a new RFQ is submitted:

- Admin should receive an email notification
- Enquiry should automatically appear in the admin dashboard

The system should also be designed so that CRM integration can be added later.

---

8. CONTACT & ENQUIRY MANAGEMENT

The Contact Us section should have a proper enquiry form.

Information can include:

- Name
- Company
- Country
- Email
- Phone
- Subject
- Message

All enquiries should be stored in the backend.

Admin should be able to:

- View enquiries
- Search
- Filter
- Mark as contacted
- Mark as closed

- Add notes

---

9. SEO & PERFORMANCE

SEO should be implemented from the beginning.

SEO requirements:

- SEO-friendly URLs
- Custom meta titles
- Meta descriptions
- Proper H1/H2/H3 structure
- Canonical URLs
- XML sitemap
- Robots.txt
- Open Graph metadata
- Structured data/schema markup where relevant
- Search-engine-friendly product pages
- Image alt text
- Internal linking structure

Performance:

- Image optimization
- Lazy loading
- Code optimization
- Caching
- CDN compatibility
- Fast page loading
- Mobile performance optimization
- Core Web Vitals consideration

Analytics:

- Google Analytics
- Google Search Console
- Conversion/event tracking

---

10. SECURITY

Security should be considered from the beginning.

The website should include:

- Secure admin authentication
- Strong password policies
- Role-based access where required
- Secure file uploads
- File-type validation
- Input validation
- Protection against common web attacks
- Spam/bot protection
- Database security
- API security
- HTTPS/SSL
- Secure session management
- Regular backup capability
- Error logging
- Audit/activity logs for admin actions where practical

---

11. LIVE COMMODITY DESK

We want to include a dedicated **Live Commodity Desk** on the website.

This should function as a dynamic commodity/trading dashboard where we can display our current commodity activities and relevant market information.

The admin should be able to update the information from the backend without changing the website code.

A. ACTIVE COMMODITIES

Each commodity listing can include:

- Commodity name
- Category
- Origin
- Available quantity
- Unit

- Specification
- Quality/grade
- Packaging
- Availability status
- Target market/destination
- Last updated date/time
- Request Quote button

B. MARKET INFORMATION

Where reliable external data sources/APIs are available, we should have the option to display:

- Commodity price
- Currency
- Unit
- Price movement
- Market/benchmark
- Date/time of update

For commodities where reliable live API data is not available, the admin should be able to manually update the information.

The system should clearly distinguish between:

External live market data

and

Hamsavahin's own indicative/quoted/trading information.

Each relevant data point should show:

Last Updated: [Date & Time]

C. TRADING OPPORTUNITIES

The Commodity Desk should include sections such as:

Available for Sale

Commodities currently available from Hamsavahin/suppliers.

Buying Requirements

Commodities that Hamsavahin or its network is looking to procure.

Active Enquiries

Current trading opportunities.

Spot Opportunities

Short-term/spot trading opportunities.

Long-Term Requirements

Long-term supply/buying requirements.

Upcoming Shipments

Relevant upcoming shipments where information is intended for public display.

Each opportunity can show:

- Commodity
- Quantity
- Specification
- Origin
- Destination
- Incoterm
- Availability
- Validity
- Status
- Last updated date/time

D. LIVE STATUS

Use simple status indicators such as:

- Available
- Limited Availability
- Under Negotiation
- Sold
- Requirement Open
- Closed

E. ADMIN CONTROLS

Admin should be able to:

- Add commodities
- Edit commodities
- Delete/archive commodities
- Update quantities

- Update specifications
- Update prices
- Update availability
- Add/remove trading opportunities
- Mark opportunities as active/closed
- Set validity dates
- Upload specification documents
- Control public visibility
- Update market information
- Update timestamps

IMPORTANT

The Live Commodity Desk should be built as a **dynamic module**, not hard-coded content.

The architecture should allow future integration with:

- Commodity price APIs
- Market-data providers
- Internal trading data
- CRM
- ERP
- Inventory systems
- Logistics/shipping data

We should build the infrastructure now so these integrations can be added later without rebuilding the entire website.

---

12. OUR CAPABILITIES

Create a dedicated section explaining Hamsavahin's capabilities across the commodity value chain.

Potential areas include:

- Sourcing
- Supplier network
- Quality verification
- Processing/beneficiation where applicable
- Documentation

- Logistics
- Shipping
- Export/import coordination
- Trade finance coordination
- Global distribution
- Buyer/supplier coordination

This section should be manageable from the admin panel.

---

13. QUALITY & COMPLIANCE

Create a dedicated section covering:

- Quality assurance
- Product specifications
- Testing
- Inspection
- Certifications
- Documentation
- Compliance
- Traceability
- Supplier verification
- Shipment documentation

Documents should be uploadable and manageable from the admin panel.

---

14. SUSTAINABILITY

Create a professional section covering Hamsavahin's approach to:

- Responsible sourcing
- Environmental considerations
- Sustainable operations
- Supply-chain responsibility
- Compliance
- Responsible mining/sourcing practices where applicable

This content should be editable through the CMS/admin panel.

---

15. PROJECTS / TRADE STORIES

Create a dynamic Projects / Trade Stories section.

Each project/trade story can include:

- Project title
- Commodity
- Country
- Origin
- Destination
- Quantity, where appropriate
- Description
- Project timeline
- Images
- Documents where appropriate
- Key highlights
- Status

Admin should be able to add new projects without developer assistance.

---

16. INSIGHTS / KNOWLEDGE CENTRE

Create a dynamic Insights section for:

- Commodity insights
- Market updates
- Industry articles
- Trade information
- Company updates
- Project updates
- Export/import information

Each article should support:

- Title
- Author
- Date

- Category
- Featured image
- Content
- SEO metadata
- Tags
- Publish/unpublish

---

17. CAREERS

Create a dynamic Careers section.

Admin should be able to:

- Add job openings
- Edit jobs
- Close jobs
- Set location
- Set experience
- Set department
- Add job description
- Add requirements
- Add application deadline

Job application form should support:

- Name
- Email
- Phone
- Position
- Resume upload
- Cover message

Applications should be stored securely in the admin panel.

---

18. DOCUMENT MANAGEMENT

The backend should support secure document management for relevant:

- Product specifications

- Certificates
- Technical documents
- Brochures
- Company documents
- Project documents

Documents should not automatically be publicly accessible just because they are uploaded.

The admin should control whether each document is:

- Public
- Private
- Restricted

---

19. FUTURE INTEGRATIONS & SCALABILITY

The website architecture should allow us to add future functionality without rebuilding the platform.

Potential future integrations include:

- CRM
- ERP
- WhatsApp
- Email automation
- Payment systems where required
- Logistics/shipping APIs
- Commodity market APIs
- Supplier management
- Buyer management
- Inventory management
- Trade enquiry management
- Document management
- Multiple languages
- Multiple currencies
- Customer portal
- Supplier portal
- Buyer portal

---

20. MULTI-LANGUAGE & INTERNATIONALIZATION

Even if we initially launch in English, the architecture should be prepared for future multilingual support.

Potential future languages:

- English
- Arabic
- Chinese
- Other international languages

The system should avoid hard-coding text in a way that makes future translation difficult.

---

21. MULTI-CURRENCY SUPPORT

The architecture should also be capable of supporting multiple currencies in the future.

For example:

- USD
- EUR
- INR
- AED
- CNY

Currency should be clearly identified wherever pricing information is displayed.

---

22. MOBILE EXPERIENCE

The mobile website should not simply be a scaled-down desktop version.

The mobile experience should be specifically optimized for:

- Navigation
- Product browsing
- RFQ submission
- Contact forms
- Commodity desk
- Interactive map/globe
- Document viewing

- Performance

---

23. WEBSITE SEARCH

We should have a global search functionality that can eventually search across:

- Products
- Commodities
- Insights
- Projects
- Trade opportunities
- Locations

Search should be designed so it can be expanded as the website grows.

---

24. NOTIFICATIONS & EMAIL SYSTEM

The backend should support automated notifications for:

- New RFQ
- New contact enquiry
- New job application
- Important admin events
- Commodity opportunity updates where required

Email templates should ideally be manageable/configurable from the backend.

---

25. DATABASE DESIGN

Please create a proper relational/database structure rather than storing everything as static content.

The database should be designed around entities such as:

- Users
- Products
- Categories
- Commodities
- Specifications
- Locations
- Mines

- Suppliers
- Facilities
- Ports
- Markets
- Projects
- Insights
- RFQs
- Enquiries
- Trading Opportunities
- Job Openings
- Applications
- Documents
- Notifications

The relationships between these entities should be designed properly so the system can scale.

---

26. API ARCHITECTURE

The system should be API-ready.

APIs should be used wherever appropriate for:

- Commodity market data
- Maps/globe
- CRM
- ERP
- Email
- WhatsApp
- Analytics
- Future third-party integrations

External API credentials should never be exposed on the frontend.

---

27. ADMIN DASHBOARD

The admin dashboard should provide an overview of the business website activity.

Potential dashboard widgets:

- Total Products
- Active Commodities
- Active Trading Opportunities
- New RFQs
- New Contact Enquiries
- Open Job Applications
- Published Insights
- Global Locations
- Recent Activities

This should give management a quick overview when they log into the backend.

---

28. ANALYTICS & BUSINESS INTELLIGENCE

We should be able to track website activity such as:

- Website visitors
- Product views
- Most viewed commodities
- RFQ submissions
- Contact enquiries
- Country-wise visitors
- Traffic sources
- Conversion rates

This will help us understand which commodities/products are generating interest.

---

29. BACKUP & MAINTENANCE

The system should have a proper backup strategy.

Please consider:

- Database backups
- Uploaded-file backups
- Recovery process
- Error monitoring
- Server monitoring

- Security updates
- Dependency updates
- Disaster recovery considerations

---

30. DEPLOYMENT & SOURCE CODE

We should receive and retain ownership/access to:

- Complete source code
- Database
- Admin panel
- Server/deployment configuration
- API documentation
- Environment/configuration documentation
- Domain
- Hosting/server
- Third-party integrations

The project should not be locked into the developer's personal accounts.

All important credentials and ownership should remain with Hamsavahin.

---

31. DOCUMENTATION

The developer should provide basic technical documentation covering:

- Website architecture
- Technology stack
- Database structure
- API integrations
- Deployment process
- Admin-panel usage
- Backup process
- Environment setup
- Important dependencies

This will make future maintenance easier.

---

32. DESIGN DIRECTION

The visual identity should be:

Premium + International + Corporate + Modern + Trustworthy + Industrial

The website should communicate:

- Global reach
- Reliability
- Scale
- Professional trading
- Strong supply network
- Quality
- Compliance
- Transparency
- Modern technology

Avoid making it look like a generic mining-company website or a basic WordPress/template website.

The design should have strong visual storytelling, high-quality imagery, clean typography, subtle animations and professional data visualization.

---

33. FINAL OBJECTIVE

The objective is not simply to build a company website.

We want to build a **scalable digital platform for Hamsavahin's global commodity trading business**.

The core priorities are:

**Premium Design

- Custom Development
- Strong Backend
- Dynamic Product Catalogue
- Live Commodity Desk
- Interactive Global Operations
- RFQ & Trade Enquiry System
- Admin-Controlled Content
- SEO
- Security

- Performance
- Scalability
- Future API/CRM/ERP Integrations**

The website should be built in a way that allows Hamsavahin to evolve from a corporate website into a **digital commodity trading and business-development platform** over time.
